**KSW CONSTRUCTION BUILDING WEIR MINERALS ADDITION**  
*Madison project includes specialized Tilt-up building construction*

**MADISON, Wis.,** (May 29, 2008) – KSW Construction Corporation is scheduled to complete construction of Weir Minerals expansion project, which includes a distribution center, parking lot expansion and office addition, in June, according to KSW Construction Corporation co-founder and Stoughton, Wis., resident Doug Slaby. The 42,000-square-foot distribution center and 7,000-square-foot office addition are located next to Weir Mineral's current location at 2701 S. Stoughton Road, Stoughton, Wis. "KSW Construction was selected for this project because of our ability to provide the cost-effective and efficient Tilt-up construction method," said Slaby. He continued, "Tilt-up construction is one of the most energy-efficient building processes available today, because it includes a mass of concrete that greatly reduces peak heating and cooling costs."

According to the Tilt-up Concrete Association, Tilt-up construction (also called tilt-wall construction) is a cost-effective way to create large concrete buildings more quickly than with concrete block or other construction methods. With a Tilt-up project, the building's walls are poured at the jobsite in large slabs of concrete called panels. The wall panels are then lifted, or tilted up, into position around the building's base slab. "A Tilt-up building was the right choice for Weir Minerals because it provided cost-savings, an efficient construction schedule and will create an aesthetically appealing, durable structure that can be easily maintained and expanded in the future," said Bob Elliott, Weir Minerals vice-president of operations.

-more-

A world-wide company, Weir Minerals delivers market leading products and services in the mining and mineral refinement industry. Weir Minerals delivers end-to-end solutions for all mining, transportation, milling, processing and waste management activities. Designed for the world's most demanding environments, Weir Minerals' high performance pumps and processing equipment meets the most arduous specifications without fuss. Reliability, long wear life, high efficiency and ease of maintenance are all hallmarks of Weir Minerals' products and services.

KSW Construction Corporation is a Madison-area full-service general contractor providing design/build and construction services for restaurant, commercial, industrial, retail and service projects with a fresh, progressive approach. Founded in 2005, KSW Construction is committed to delivering a quality project on time and on budget, while providing excellent personal service.
